Geo Map of Country sized by Daily Confirmed Cases

A3.1

Daily Confirmed Cases by Reported Date

The provided graph displays the daily number of confirmed cases of an event (CORONA-VIRUS outbreak) as recorded by the reported date. This visualization helps track the short-term trend and magnitude of new case detection over time. By looking at the reported date, one can observe peaks and troughs in testing, reporting, or disease transmission activity. It's a key metric for understanding the current phase of an epidemic or situation, and for assessing the immediate impact of interventions. This kind of data is crucial for public health officials making real-time decisions.
